

Version | Docs | HERY

The version numbering follows the same as [Golang's](#) standard.

The versions are set in the tags in a Git repo. If no version is found then a pseudo-version number will be generated just like in [Golang](#).

Entity version numbering

HERY follows the same [versioning standard](#) as [Golang](#).

Version stage	Example	Description
In development	Automatic pseudo-version number v0.0.0-20170915032832-14c0d48ead0c	Indicates that the module is currently in development and is considered unstable . This release does not offer backward compatibility or stability assurances.
Major version	v1.x.x	Indicates public API changes that are not backward-compatible . This release does not guarantee compatibility with previous major versions.
Minor version	vx.4.x	Indicates public API changes that are backward-compatible . This release guarantees both backward compatibility and stability.
Patch version	vx.x.1	Indicates changes that do not impact the module's public API or its dependencies . This release ensures backward compatibility and stability.
Pre-release version (alpha, beta, rc)	vx.x.x-beta.2	Indicates that this is a pre-release milestone, such as an alpha or beta version . This release does not offer any stability guarantees.

Manage Tag Versioning

Steps to add a tag:

```
git tag -a v1.0.0-alpha.1
git push --tags
```
